

Lift modernisations

ascendantlifts.co.uk

Over 50 years of experience in the lift industry

Since our founding in 2003, we have been committed to delivering top-tier lift and escalator solutions tailored to meet the unique needs of each client, ensuring safety, efficiency, and reliability in every project we undertake.

With our management team holding over 50 years' experience combined in the lift industry and offices for the North East & Yorkshire and North West & Midlands, we can offer nationwide coverage for lift maintenance and repairs, modernisations, platform and goods lifts installations and LOLER inspections.

We have built up a reputation with clients as a reliable supplier who goes the extra mile, ensuring we deliver excellence, integrity, and the highest standards of customer service in everything we do. We pride ourselves on supplying high quality solutions that are fully open protocol, giving our clients both peace of mind and flexibility in the future.

Lift modernisations

With regular servicing, a lift can last many years. However, once a lift becomes a certain age, replacement parts are rare to find and expensive

to purchase. This is when you should consider a Lift Modernisation.

With this, we assess all components for potential upgrades or replacements, improving the existing elevator system to enhance its performance, safety, efficiency, and aesthetics.

We offer solutions for passenger lifts, goods lifts, platform lifts, service lifts and access products.

- **24/7 high skilled Lift Engineers, who have all attained a minimum of NVQ3 or higher and are local to fulfil a 2-hour response time for a breakdown and 1-hour response time for entrapment / H&S situations.**
- **Comprehensive warranty offered on all parts fitted.**
- **Any parts that are fitted are open protocol to give the client long term peace of mind.**
- **A dedicated After Care Team from project completion to ensure all warranties are executed.**
- **In-House Technical Support Team**

Why get a lift modernisation?

Safety

Over time, lift components can wear out or become outdated, compromising safety. Modernisation ensures that safety features are up-to-date and meet current standards, reducing the risk of accidents and injuries.

Reliability

As lifts age, they may experience more frequent breakdowns and downtime. Modernisation upgrades components to improve reliability, reducing the likelihood of service interruptions and inconvenience to users.

Efficiency

Older lifts are often less energy-efficient, leading to higher operating costs. A modernisation can include energy-efficient upgrades, such as new motors and control systems, resulting in reduced energy consumption and lower utility bills. This also reduces downtime and prevents technical faults halting your work.

Compliance

In the case of an existing lift installation, it should not be assumed that the equipment complies with all current regulations and/or standards. This is particularly unlikely in the event of equipment that is over ten years of age. A modernisation ensures compliance with the latest standards including LOLER, avoiding potential legal issues.

Improved performance

Modernisations can enhance the performance of a lift, providing smoother rides, faster operation, and better overall user experience.

Enhanced aesthetics

Older lifts may look outdated and detract from the appearance of a building. A modernisation can include cosmetic upgrades, such as new cabin interiors and fixtures, to improve aesthetics and enhance the building's image.

Overall, lift modernisation offers customers the opportunity to extend the lifespan of their lifts, improve safety and performance, reduce operating costs, and enhance the value of their business.

What we offer

Ascendant Lifts & Escalators take pride in offering the very best in lift modernisation packages for all our clients. Our scope of works can be a simple lift controller replacement through to complete complex back to guides projects with everything in between.
